Understanding the AP Psychology Exam

The AP Psychology exam is a standardized test administered by the College Board, designed to assess high school students' understanding of psychology as a scientific discipline. This exam is typically taken at the end of the course and is recognized by many colleges and universities for college credit. Understanding the structure and content of the exam is crucial for effective preparation.

Exam Structure

The AP Psychology exam consists of two main sections: multiple-choice questions and free-response questions.

- **Multiple-Choice Questions:** This section includes approximately 100 questions that test students' knowledge of key concepts, theories, and terminology in psychology. Students have 70 minutes to complete this portion of the exam.

- **Free-Response Questions:** This section usually has two questions that require students to apply their knowledge to hypothetical scenarios or case studies. Students have 50 minutes to complete this part.

Scoring

The scoring of the AP Psychology exam is based on a weighted system. Each correct answer in the multiple-choice section earns points, while incorrect answers do not deduct points. The free-response section is scored based on a rubric that evaluates the quality of the students' responses. The overall score is then converted to a 1-5 scale, with 5 being the highest possible score.
