- Behaviorism focuses on observable behaviors and the ways they can be learned or unlearned through conditioning. Key figures include B.F. Skinner and John Watson.
- Cognitive Psychology examines internal mental processes, including perception, memory, and problem-solving. Pioneers such as Jean Piaget and Albert Bandura contributed significantly to this area.
- Humanistic Psychology emphasizes individual potential and stresses the importance of growth and self-actualization. Notable figures include Carl Rogers and Abraham Maslow.
- Psychoanalysis delves into the unconscious mind and its influence on behavior, with Sigmund Freud being the most recognized figure.
